Spreading Multifunctionality in the European Union

Multifunctional farming boosts entrepreneurial spirit of young farmers

Project developed by:

EUROPEAN COUNCIL
OF YOUNG FARMERS

The **MULTIFARM_EU** project is a dissemination activity of the Agri-multifunctionality II project, of which the main outcome is a **training system** made for young European Farmers who would like to start different activities on their farms, thereby adapting their farms to the multifunctionality concept.

The results are available on the project webpage:

<http://www.agri-multifunctionality.com>

The **training system** is made-up of the following parts:

- A theoretical/background document on the state of the art of Multifunctionality in Agriculture;
- A teaching guide for trainers;
- The training system based on 51 case studies from 20 EU Member States.

The **MULTIFARM_EU** project wants to address the needs of young farmers so that they are able to adapt to societal demands for an increasingly multifunctional agricultural sector. It is proven that multifunctionality in farming leads to positive results in terms of the revitalisation of rural areas and improving the prosperity of the rural economy.

PROJECT Coordinator: **CEJA**

CEJA is the voice of European Young Farmers and represents around two million young farmers to the European Institutions. Today, CEJA is made-up of 31 national member organisations from 24 EU Member States. CEJA is considered to be one of the key advocates in the area of agricultural policy at European level. CEJA's main objective is to promote a young, innovative and sustainable agricultural sector across all 28 Member States of the European Union and to foster attractive working and living conditions for young people in farming – both those who want to start their own farms and those who are already established in the farming profession.

Lifelong
Learning
Programme

This project has been funded with support from the European Commission under the Lifelong Learning Programme
